

eProphet

Back Office Software

eProphet is the most powerful back office system available to Quick Service Restaurant operators in Australia

Increase profits

The key to increasing profit margin is to work smarter, not harder. eProphet gives you cost effective tools to change the way you do business and increase your returns.

Decrease costs

Every restaurant has operational costs - these costs are management variables. eProphet provides the tools you need to apply a systematic approach to cash and inventory management, sales data analysis, ordering procedures, staff rostering and labour management.

By providing accurate information to your management team, losses will be minimised and your bottom line improved.

Modular Technology

eProphet is comprised of a suite of software modules that exchange data between them. This reduces multiple entry of the same data into different parts of the system.

-  **eProphet Central**
Sales Ledger, Sales Projections, Daypart Sales, Sales Reporting, Tasks & Recurring Tasks, Calendar & Diary, Employee Cash Handling, EFTPOS
-  **Cash Control**
POS Processing, Cash Entry Verification, Cash Shift Management, Cash Deposit Tracking
-  **Stock Control**

-  **Daily Labour**
Timeclock Processing and Review, Daily Activity & Labour Management, Employee Database
-  **Rosters**
Roster Preparation, Crew Availability & Proficiency Management, Import/Export Roster Facilities

Web Based Updating

If you possess a reliable internet connection, Abcom can automatically update your eProphet backoffice system with the latest product upgrades and updates. This will keep your system running at peak performance with all the latest tools, reports and facilities.

User-ordered Data Listing

Through advanced listing facilities and controls, data can be ordered and formatted by the user to locate information quickly and precisely. Single items can also be found instantly by using the key sensitive search mode.

Internet Ordering

eProphet has the ability to electronically receive invoices from suppliers via the Internet and load the data directly into your Stock System. Once the data has been reviewed and approved the invoice is then posted into the accounting system. This process eliminates the manual entry and re-entry of multi-page invoices. This will not only save you a significant amount of time and money, but will also make your Stock system more accurate thus avoiding ordering errors.

Digital Communications

eProphet supports complete sales data transfer from computerised register systems such as PAR, Panasonic, NewPOS and Compris. Employee labour clockings can also be transferred from digital timeclocks such as Abcom ZIPNET, HP and Olivetti.

System Security

eProphet operates within a user/password secure environment. This ensures that users can access only those areas to which they have authorisation. These user codes are attached to system changes and actions so that accountability is logged in the system.

Full Data Reporting

Detailed, date stamped and uniform reports that can be printed to any Windows® printer at the click of a mouse. eProphet produces all the detailed accounting audit trails and paper records necessary for your business.

Easy to Use

eProphet incorporates user centred data entry processes that streamline daily operation. Data is entered in logical order to the user, not the computer, allowing managers to spend less time on the computer and more time on the floor running the store.
